<b>Purpose and Need</b>									
Currently, traffic on the Golden Gate Bridge is separated by hollow plastic tubes that serve as a visual delineation of opposing traffic while presenting no physical protection. From 1970 to 1995, accidents on the Bridge averaged 80 per year with as many as 138 accidents in 1985. In September 1996, state legislation established the Golden Gate Bridge as a double fine zone, and accidents averaged 29 per year through 2004 when the legislation expired. The installation of a moveable median barrier would provide safe and smooth passage across the Bridge.									
<b>Project Benefits</b>									
A moveable median barrier on the Golden Gate Bridge would improve the safety of the 40 million vehicles that cross the Bridge annually. This project would provide a physical separation between opposing directions of traffic, while maintaining the ability to reconfigure the lanes to provide additional capacity for the peak travel direction. It would virtually eliminate cross-over, "head-on" accidents on the Golden Gate Bridge as well as allow for the maximum efficiency of traffic flow on this highway facility.
